

Digipass Enterprise Phone Installation

About 20 minutes after your Digipass token has been approved you will receive an email from Accessweb that directs you to a website on how to install and activate the software.

Click the link and then login to the web page that comes up. After you login to the website you will see a screen similar to the one below that contain instructions on how to download and activate your token.

QR code

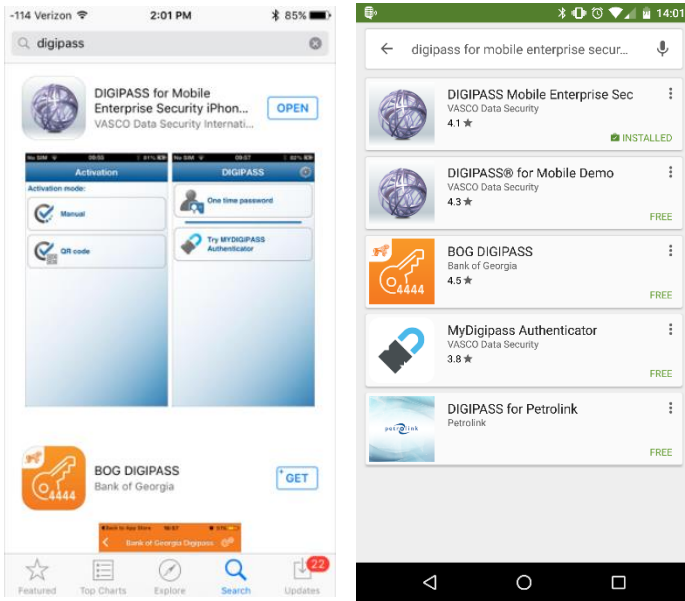

Enter code from your phone:

Your Code Here

Instructions

1. Go to the App Store (IOS, Android, and Windows Phones).
 2. IOS Users will need their Apple ID, and password for Apple, before they try to download the app.
 3. Search for Digipass.
 4. Download and install the application called "Digipass for Mobile Enterprise Sec."
 5. Once the application is installed on your phone you can activate the application.
 6. Open the Digipass Enterprise Application.
 7. Select the "QR" code activation option.
 8. Scan the QR code on this screen.
 9. Select One Time Password.
 10. A 6 digit one time password will be displayed on your phone.
 11. Please enter that code on this screen in the textbox and submit.
- NOTE: Be aware the passcode is good for 60 seconds, then a different one will appear on the phone.
Please enter the passcode quickly

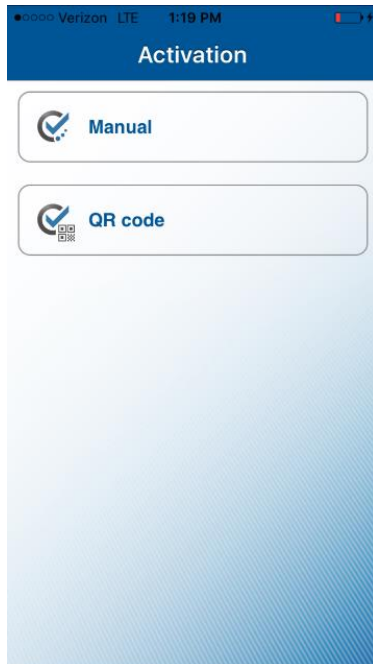

Search for Digipass in your Apple App Store, Google Play Store, Microsoft App Store, and on Blackberry

Once Digipass has install you will see the icon list with your other installed apps.

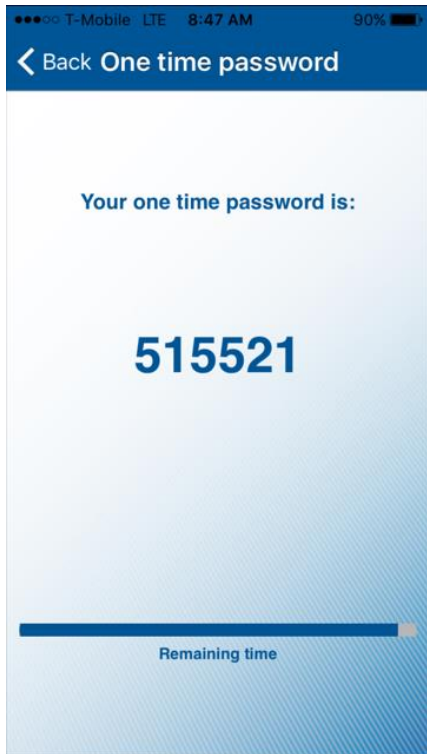

Once the Digipass application has been opened for the first time it prompts you to select the activation process. Select the QR code activation

Digipass uses the camera to scan the QR code for activation. Allow Digipass to access your camera by selecting OK. This is only a one time action so Digipass can scan the QR activation.

Once you scan the QR code the Digipass software will be activated and you will get the one time password. Enter this into the box under the QR code on the website and hit "Submit".

After entering the one time password from your phone on the website, it will give you a conformation page letting you know that the activation was successful.

Instructions

1. Go to the App Store (IOS, Android, and Windows Phones).
 2. IOS Users will need their Apple ID, and password for Apple, before they try to download the app.
 3. Search for Digipass.
 4. Download and install the application called "Digipass for Mobile Enterprise Sec."
 5. Once the application is installed on your phone you can activate the application.
 6. Open the Digipass Enterprise Application.
 7. Select the "QR" code activation option.
 8. Scan the QR code on this screen.
 9. Select One Time Password.
 10. A 6 digit one time password will be displayed on your phone.
 11. Please enter that code on this screen in the textbox and submit.
- NOTE: Be aware the passcode is good for 60 seconds, then a different one will appear on the phone.
Please enter the passcode quickly

You have successfully created a Digipass. You are done. You may close this page.
